

*Here we go loopy
loop*

Practical magnetic loop antennas for
the frugal QRPer

FDIM 2017, adapted for MARA 2026

Howard Zehr K4LXY

Why a small loop?

- Portable, quick-setup
- No radials/counterpoise
- Practical & inexpensive to build
- Not too dependent on height
- Low noise and ability to null noise

- ahars.com: if well-built, equals other antennas on 10/15/10M (VK5KLT)

Power patterns shown shaded.

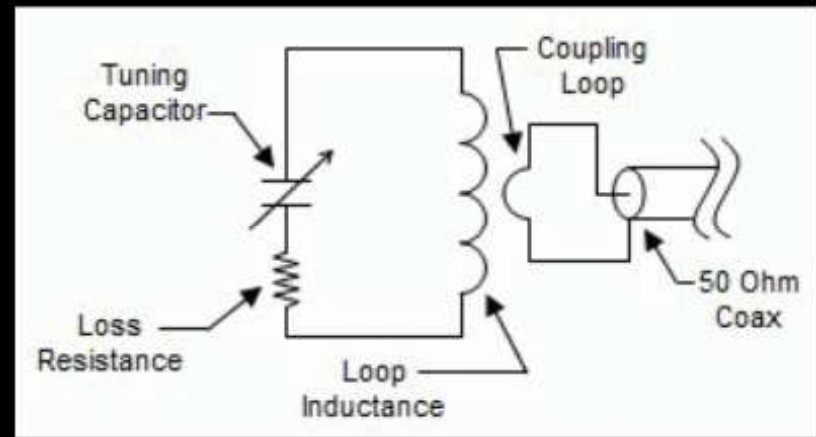

Hertzian Dipole

Small Loop

Inductive coupling

Coil sizes

- Circumference of outer coil 12ft (9-15).
- Coupling coil – $\frac{1}{4}$ or $\frac{1}{5}$ of outer coil
- (Note: for me, mostly 30M and 40M)

Challenges

- LC circuit with high Q, thus sharp tuning
- Low feedpoint impedance
- Potential for high loss if SWR above 1.5 or if poor connections, e.g. to/in capacitor
- Affected by nearby ferrous material

Here we go loopy loop

All on a QRP site!

Use push your feed loop up

You squeeze your feed loop out

You give your cap a twist, twist, twist

And turn your loop about!

... and turn
myself about!

All on a QRP site!
